

## AMScomsystem with AMStestmodul

### Communication-, test- and Controlplatform for

- ▶ **MEDISEND® super III**
- ▶ **MEDISEND® super C**
- ▶ **WAVE TRANSFER C**
- ▶ **METRONOM C**

With our **AMScomsystem/ AMStestmodul** control software we offer you:

**New!**

**„Everything in a single-system“  
testing – treatment –  
documentation**

You control everything quickly and easily with a mouse and pedal click.

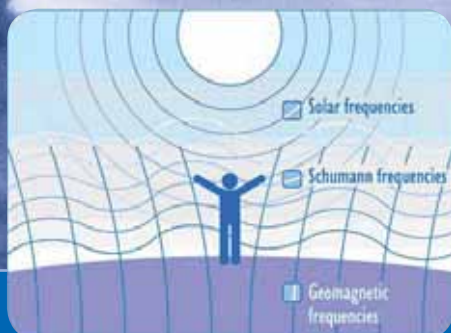

### **AMScomsystem / AMStestmodul**

**AMScomsystem / AMStestmodul** comprise three interconnected operating areas.

**Person-Manager:** Documentation / management of personal and treatment data.

**Device-Manager:** Control of devices settings / storage of treatment templates and programs.

**BIOWAVE-Manager:** Digitization\* storage and management of bioinformation as single and complex agents in the form of so-called BIOWAVES or BIOWAVE files and transmission of BIOWAVES for individual and block testing and therapy (incl. data management and communication or sending of BIOWAVES by e-mail).

**A replica of the undisturbed nature.**

\*For transfer you need additionally to the software the **WAVE TRANSFER C**.

## AMScomsystem / AMStestmodul offers a wealth of control and programming possibilities!

- ▶ Guarantee completely new performance spectra, covering the digitization, storage and transmission of bioinformation / BIOWAVES in the form of single and complex agents or "blocks" for testing and treatment.
- ▶ Offer convenient, easy and fast management/documentation of personal, test and treatment programs.
- ▶ Have reliable and clear menu guidance.
- ▶ Complete everything with a mouse and pedal click.

USB-pedal

Laptop may differ from the illustration.

### Scope of delivery

Laptop with Windows 7® and installed AMScomsystem / AMStestmodul, USB pedal switch and "Starter Pack" (approx. 60 digitized biowaves), detailed operating instructions.

## Testing and therapy- How does it work?

For testing appropriate bioinformation / BIOWAVES are transmitted to the person to be tested in the form of single or complex agents or also in the form of so-called "block testing" via magnetic field\*. Regulative changes are tested using a bioenergetic test procedure (e.g. kinesiology / working with the tensor / RAC testing / EAV testing / electroacupuncture acc. to VOLL).

The pedal switch included in the scope of delivery permits quick and convenient test completion and test evaluation by "highlighting the test result" accordingly. Where necessary, the logged test results can at any time be subjected to retesting or supplemented by further tests. The BIOWAVES selected in this way can then be translated either individually or as complex agents (so-called multiple BIOWAVES) into concrete treatment\* and on completion stored and/or documented as a so-called "template" for further treatment concepts (e.g. allergies, heavy-metal accumulation, food intolerance, tooth materials, intestinal cleansing, fungi, viruses, bacteria, environmental toxins, chronic inflammations, organ complaints, medico-chemical complaints, vaccinations, detoxification, expulsion, immune stimulation...). And finally you have the option of storing a BIOWAVE on the portable METRONOM C\*, which has proven highly effective as a form of complementary home treatment.

AMS now has a database of over 6,000 digitized BIOWAVES.

A summary of already digitized BIOWAVES can be obtained at [www.ams-ag.de](http://www.ams-ag.de)

Login required: user name and password: **ams2005**

„Everything in a single system“ brings for you only advantages:

Buy once – All following systems/ devices head:

**WAVE TRANSFER C**

**MEDISEND® super III**

**MEDISEND® super C**

**METRONOM C**

order number **902**

Presented by:

\*for transfer you need additionally to the software the MEDISEND® super III or the MEDISEND® super C.
