

### Additional settings

**Modulation:**  
The signal of the magnetic field can additionally be modulated with 1.6 or 3.3 Hz. Both frequencies give the application a **soothing character**.

**Audio:**  
The **COLOR-Punctur** can give an **acoustic feedback** for the point search as soon as the point is found. This acoustic function can also be deactivated.

**Sensitivity:**  
The **measuring sensitivity** of the MAGNETO-stylus can be regulated to detect acupuncture points. This allows to compensate a very dry or moist skin surface for a consistent measurement.

**Time:**  
You can program the **duration** of the application.

### Dr. Ludwig's devices

All our devices - and so the **COLOR-Punctur** - are made according to the technology developed by Dr. Ludwig. It was important to him to develop devices that produce an artificial pulsating electromagnetic field that is as close as possible to the **natural field of the environment**. Therefore, the following statements apply to all large devices that are (further) developed by Dr. Ludwig and in his institute:

- Generation or possible choice of the main value of the **Schumann frequency spectrum (7.8 Hz)**
- Generation of the **Geomagnetic frequencies** (64 trace elements)
- Generation of the **Solar frequencies** (to the sunlight corresponding FM frequencies)

Furthermore, all devices produce a signal whose **pulse shape** and **magnetic field strength** is optimally matched to the body.

You find detailed information about Schumann, Geomagnetic and Solar frequencies as well as the quality characteristics of Dr. Ludwig's devices on our double-paged information sheet **Magnetic field therapy - Bioresonance - Bioinformative Methods** or on our website [www.magnetotherapy.de](http://www.magnetotherapy.de) in the menu item **Basics of the magnetic field therapy**.

The devices that are developed by Dr. Ludwig are identified with the **arrow symbol**. The symbol stands for the creation of an electromagnetic biofield reflecting **undisturbed nature**.

## COLOR-Punctur

#### Technical data:

**Twelve colors:** Tred, red-orange, orange, yellow-orange, yellow, yellow-green, green, green-blue (turquoise), blue, blue-violet (indigo), violet, purple

Luminescence diodes produce almost the monochromatic light of the according color

**Magnetic field frequencies:** 3.3 / 6.5 / 7.8 / 8.5 / 9.5 / 11.5 / 12.5 / 15 / 17 / 18 / 19 / 30 Hz

**Physiological range:** 30 cm / 11.8 inches in diameter

**Additional settings:** Sensitivity and time setting as well as the possibility of an amplitude and frequency modulation of the selected color with 1.6 Hz and 3.3 Hz

**Interfaces:** six-pole output for connection of the MAGNETO-light stylus, a bipolar, symmetric input allows the connecting of a MEDICUP and hand electrodes

**Battery:** built-in rechargeable battery

**Size:** 26.5 x 19 x 10.6 cm / 10.4 x 7.5 x 1.8 inches

**Weight:** 1,7 kg / 3.7 pounds

**Scope of delivery:** **COLOR-Punctur**, MAGNETO-stylus, battery charger, one hand electrode (counter electrode for point localization), manual

**Not part of the scope of delivery:** MEDICUP and second hand electrode. You can purchase these items **optionally**.

**Warranty:** 2 years

**Order No. COLOR-Punctur:** 203

**Order No. MEDICUP:** 501

**Order No. hand electrode:** 503

Thank you

## COLOR-Punctur

colors and pulsating electromagnetic field

The **COLOR-Punctur** is a very special magnetic field device - it combines its pulsating electromagnetic field with the **light of 12 selected colors**.

**Thus, you can combine proven methods of natural medicine:**

- Acupuncture
- Color-light-therapy
- Pulsating electromagnetic field
- Transfer of exogenous and endogenous bioinformation

For this purpose, the applicator **MAGNETO-stylus** is attached to the **COLOR-Punctur**. It looks like a pen and emits from its tip the light in the **selected color** as well as the **pulsating magnetic field in the corresponding frequency**.

The **MAGNETO-stylus** fulfills **different functions:**

- Output of the light in the selected color and the corresponding magnetic field frequency
- Detector for acupuncture points
- Measurement function following the electroacupuncture according to Dr. Voll (EAV)

### The COLOR-Punctur...

versatile application →

combines **proven methods of regulatory medicine** - color light, acupuncture, pulsating magnetic field and - with the help of connected hand electrodes and MEDICUP - transmission of endogenous and exogenous bioinformation (e.g. homeopathic remedies, Bach flowers, nosodes, etc.)

unlocks regulatory blockades →

enhances any **holistic therapy concept**. It helps to unlock regulatory blockades and contributes to a stable energy balance.

point detection →

has a function to **detect acupuncture points**. Due to its ability to measure the skin resistance, the application starts as soon as you have found the acupuncture point with the stylus.

EAV functionality →

can also be used in the sense of an **electroacupuncture measurement (EAV)**. Optical and acoustic feedback supports the measurement function.

# COLOR-Punctur

## Colors and magnetic field - a powerful combination

Usage →

### Choice of colors

By pressing the colored buttons on the device, you can select one of **twelve colors** that you want to use. Each color refers to a certain **magnetic field frequency**.

In the figure on the right you see the **color chart with the corresponding magnetic field frequencies**. The colors shown correspond approximately to the generated colors of the MAGNETO-stylus.

The most suitable color/frequency for the application can be **selected intuitively** or can be determined by testing with tensor, kinesiology or other **testing methods**.

No.	Color	Magnetic field frequency in Hz
1	red	19
2	red-orange	18
3	orange	17
4	yellow-orange	15
5	yellow	12,5
6	yellow-green	11,5
7	green	9,5
8	green-blue (turquoise)	8,5
9	blue	7,8
10	blue-violet (indigo)	6,5
11	violet	3,3
12	purple	30

The AMS regularly offers a **tensor seminar** once or twice a year where you can learn how to use the tensor. The seminar takes place in the South of Germany and is held in German language. Dates and more information can be found on our website [www.magnetotherapy.de](http://www.magnetotherapy.de) in the menu item **Seminars**.

As soon as you have selected a color/magnetic field frequency, position the MAGNETO-stylus onto the desired **acupuncture point** where you want to apply the selected color with the magnetic field. This allows you to stimulate the acupuncture point without using needles.

The **color-light intensity does not need to be strong** in order to reach the **response threshold** of the organism. A light beam directed at acupuncture points is passed through the run of the meridians (optical fibers). At the same time, the effect of the light is enhanced by the **pulsating magnetic field**. The electromagnetic field reaches a **depth of penetration** of approx. 20 - 30 cm / 7.9 - 11.8 inches.

### Detecting and measuring acupuncture points

When you connect the included hand electrode with the blue cable to the **COLOR-Punctur**, you can also use the stylus to **detect acupuncture points**.

Using the **hand electrode as a counter pole**, you can measure with the stylus the **skin resistance**. You can set the device so that it **automatically starts** the emission of light and magnetic field as soon as you have found the corresponding acupuncture point with the stylus.

For this purpose, the **sensitivity** of the stylus can be individually adjusted - depending on the moisture of the skin surface, the stylus reacts slightly more or less sensitive to the acupuncture points.

Due to the point detection function, the device has yet also **other possibilities for usage**, for example doing an electroacupuncture measurement:

In order to be able to do an **electroacupuncture measurement**, the **COLOR-Punctur** has an integrated LED-display, which gives **visual and acoustic feedback** on the skin resistance of the measured acupuncture point. This makes it possible to check the energetic state before and after the application with an electroacupuncture measurement. Thus, in addition to other testing methods (tensor, kinesiology, etc.), there is another possibility to evaluate the energetic-physiological process.

## Bioresonance - Transfer of Bioinformation

### Magnetic field for transfer of information

The **COLOR-Punctur** emits a **pulsating magnetic field** together with the **colored light** from the MAGNETO-stylus. A pulsating electromagnetic field has the ability to **transport and transmit information**. This is comparable to the radio waves coming from the television or the radio: Here, a transmission of picture and sound is transferred by a modulated carrier wave (e.g. FM frequencies). Within the sense of bioresonance according to Dr. W. Ludwig®, the pulsating electromagnetic field is additionally used as a carrier wave for bioinformation. It is called **transfer of exogenous** (foreign to the body) or **endogenous** (body's own) bioinformation.

← Bioresonance

In order to use the magnetic field as a **carrier wave for bioresonance**, it is possible to connect a **MEDICUP** and the **hand electrodes** to the device.

### Endogenous transfer of information with the hand electrodes

With two connected **hand electrodes** you can also transmit **endogenous (body's own) information** with the pulsating magnetic field. For this purpose, you need a **second hand electrode** in addition to the single hand electrode that comes with the device.

Hand electrodes for endogenous information ←

Via the **symmetrical skin contact** (right and left half of the body), the endogenous bioinformation is tapped/ scanned by the hand electrodes and returned to the body in the form of „**attention signals**“ in the sense of bioresonance. These **attention signal** information are **modulated on the magnetic field of the stylus** and thus **returned to the body**. Through this attention signal the **regulation** can be supported in an individual way.

### Exogenous transfer of information with the MEDICUP

In order to use this ability of the magnetic field, a cup - the **MEDICUP** - is connected to the **COLOR-Punctur** device. The MEDICUP is divided into two halves so that each half is connected separately to the bipolar, symmetrical input. This ensures that the transmission is **free of electrosmog** and other information. Only the information that has been put in the cup is transferred.

MEDICUP for exogenous information ←

To transfer **exogenous information**, place the medication (e.g. any homeopathic remedy) into the MEDICUP. Use an ampule or glass vial. As soon as you have set a color/frequency on the device and start the application, the electromagnetic field acts not only as an **application signal**, but also as a **carrier wave** for the information that is inside the MEDICUP.

The application of the pulsating electromagnetic field in **combination with endogenous and exogenous information** supports especially any **detox processes**. When you connect the hand electrodes and the MEDCUP, you work with **four application signals simultaneously**:

- **light** in the selected **color**
- **pulsating magnetic field** in the associated frequency
- **endogenous information** from the connected hand electrodes
- **exogenous information** of all substances in the MEDICUP

You can purchase the **second hand electrode** and the **MEDICUP** as an accessory **optionally**.
